

Bulletin 3 - 05/97 - Shipments of Grain out of Argentina

We have been advised by one of the Club's Members that they have recently had problems with excessive moisture content in cargoes of grain out of Argentina (Rosario). These cargoes have been found mouldy at destination. We would advise owners pay particular attention to moisture content when loading this type of cargo at the moment in Argentina, and, any with recent wet damage claims should investigate further the origin of the water.
