

OPERATIONAL GUIDE

BMSB Risk Mitigation for Vehicles, Vessels, Conveyances and Farm Machinery to Fiji (New/Used)

In reference to the *Biosecurity Import Requirements for All Vehicles, Vessels, Conveyances and Farm Machinery to Fiji (New/Used Version 2.0 - 2018)*, below are the guidelines to assist with the border clearance and decision-making.

For Japan, the following agreement has been implemented:

1. For treatments, the following operators have been approved in Japan.
 - a. Japan Export Vehicle Inspection Centre Co. Limited (JEVIC)
 - b. Auto terminal Japan (ATJ)
 - c. Automotive Technological Limited (ATL)
 - d. Bordercheck Ltd, Japan
2. All treatment certificates will be endorsed by the treatment provider and endorsement by NPPO – Japan is not mandatory.
3. Those vehicles departing Japan after 120 hours of initial treatment must be accompanied by additional treatments such as spraying with insecticide.
4. The vehicles originating from China, Canada, the Republic of Korea, the Republic of Taiwan, the United States of America and are exempted from mandatory treatment as per **4.0 Additional Requirements against Targeted Pests (Brown Marmorated Stink Bug)**; however, they must go through the thorough inspection process. They are currently monitoring BMSB (profiling) and any incidence of interception of BMSB on vehicles originating from these countries, which will then warrant a mandatory team.
5. Inspection on Arrival
 - a. All consignments originating from BMSB risk countries (China, Canada, Japan, Republic of Korea, Republic of Taiwan, United States of America, Italy) will be subject to BAF inspection upon arrival in Fiji.
 - b. Japan-origin consignments must present valid treatment certificates; BAF officers will verify compliance and may order re-treatment if required.
 - c. Consignments from other listed countries (surveillance only) will undergo heightened inspection, including verification of vessel surveillance measures (e.g., insect light traps, vessel hold monitoring).

Country	Requirement	Inspection on Arrival
China	Heightened vessel surveillance only	• Inspections on arrival may apply. • BAF will verify vessel surveillance measures (e.g., insect light traps, hold checks).
Canada	Heightened vessel surveillance only	Same as China – heightened inspection and verification of vessel measures.
Japan	Mandatory offshore treatment (fumigation, heat, or residual insecticide) by approved providers (JEVIC, ATJ, ATL, Bordercheck Ltd).	The treatment certificate must be presented. BAF officers will verify compliance and may order re-treatment if requirements are not met.
Republic of Korea	Heightened vessel surveillance only	Heightened BAF inspection; verification of vessel surveillance measures.
Republic of Taiwan	Heightened vessel surveillance only	Heightened BAF inspection; verification of vessel surveillance measures.
United States of America	Heightened vessel surveillance only	Heightened BAF inspection; verification of vessel surveillance measures.
Italy	Heightened vessel surveillance only	Heightened BAF inspection; verification of vessel surveillance measures.

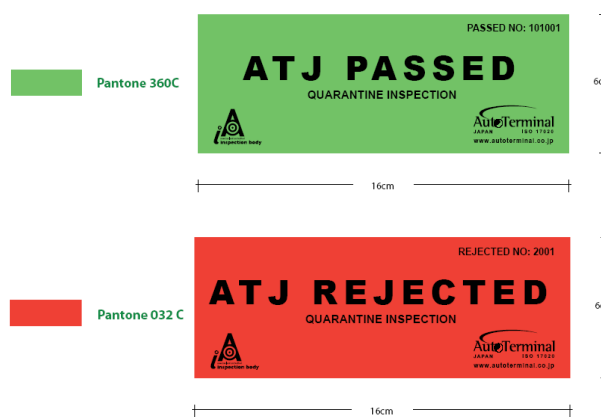

6. Any consignment found non-compliant or carrying live BMSB will be subject to immediate containment, remedial treatment, and re-export at the importer's expense.
7. For new vehicles, under the Approved System in Japan implemented by the New Zealand Ministry for Primary Industries or by the Australian Department of Agriculture, Fisheries and Forestry, the approved agents can export vehicles without treatment as per the agreed Standard Operating Procedure.

Vehicles

ATL Heat Treatment Certificate for Vehicles and Machinery Exported to Fiji

This certificate is to certify that the listed vehicle has had a heat treatment applied to the standards directed by the Biosecurity Security Authority of Fiji (BAF).

Post heat treatment a residual insecticide spray was applied immediately, and once every 7 days there after until the time of shipping.

- The insecticide spray has been applied to all external surfaces and compartments of the vehicle / machinery, especially underneath and in and around areas and cavities such as engine bays, openings, panels that are hollow and vents.
- The insecticide has been applied in two light, even coat.

Treatment Location	
Pesticide Used	Cyphenothrin
Treatment Provider (Company Name)	Automotive Technologies LTD
Vehicle details (chassis number)	
Residual spray method of application	Pressure retaining sprayer

Treatment provider signature

Vessel

DREAM JASMINE V.1853

Vessel Name Voyage No.

1. JEVIC Co., Ltd. hereby declare, that the aforementioned vessel has been treated in the following conditions using the following pesticide.

- (a) Location: Port of Yokohama (Daikoku Pier L-7)
- (b) Treated area: 7 Vessel Decks (Deck 5 - G)
- (c) Pesticide used: Kincho! Ekusumin Emulsifiable Concentrate (Permethrin 5.0% & Xylene 5.0% or less)
- (d) Dosage rate: 1 Litre / 305 m3
- (e) Temperature: 21.2°C
- (d) Exposure period: 4 Hours

2. This Pest Control Treatment Certificate has been issued to the below named applicant, details as follows;

Name of applicant

ARMACUP JAPAN K.K.

3. The vessel has been treated in accordance with standards instructed by the applicant

Date of treatment: 2018/04/10

Start time: 0830

Completion time: 1600

Authorized Signature:

Name: Futoshi Takasaki

Title: General Manager - Inspection Services

JEVIC certify the information contained herein is true and accurate.
